

I can't believe that any person or organization would want to stop satellite radio! I find it a valuable asset and one of the most innovative technologies available today. Probably one of the most important aspects to this technology is the ability to get constant traffic and weather any time, any day or night. Going to work, or coming home, there is no better way to find out if there are traffic problems or weather concerns, If anything it helps alleviate traffic congestion by having travelers use alternate routes. As far as weather issues are concerned, I know if conditions were likely to worsen as I traveled, I would either turn around and go back or find a hotel to stay at till the storm blew over. Local radio stations give you the weather and traffic conditions on THEIR TIME! Many times I've found myself flipping through the channels, trying desperately to find out which route would be the best to take. There was even a time when I actually got stuck in the snow because I didn't know that the roads I usually travel on were worse than some of the alternates. Please don't take away the most valuable services that satellite radio brings to us!! Traffic and weather 24 hours a day. Thank you.
